

CAPE OF RODON Durrës

The pilot area of Cape of Rodon in which the underwater research has been carried out, is an area of archaeological potential. Through APPRODI Project, from the local investigation have been discovered 57 archaeological remains. The archaeological material identified in the Northern area dated from the end of the IV Century BC and continued until the end of the medieval period. While the archaeological material identified in the Southern area of Cape, mainly consisted of fragments of amphorae and tableware, which belonged to the Roman imperial period (from 1-st to 3-rd Century AD)
